Task: Tech Support- Intern (Full Stack Development)

Problem Statement:

- Create a signup page where a user can register with following details(Name, email, password, confirm password).
- A login page to log in with the details(email & password).
- After successful login it should redirect to a profile page which should contain additional details such as age,gender,dob,mobile, etc that can be updated by the user.
- Once the user logs out it should redirect to the login page.
